

SUMMARY

Centec Solutions MTA/OIG Report #11-03

The NYC Transit Materiel division referred a matter to the OIG based on its belief that a distributor was not supplying Original Equipment Manufacturer (OEM) parts for movable contact bearings used in bus doors. Our investigation established that the distributor had indeed supplied counterfeit bearings but there was insufficient evidence to charge a crime. Following a responsibility hearing, and in the interests of safety, NYC Transit declared the firm to be "under suspension." In addition, the firm reimbursed NYC Transit the amount NYC Transit paid for the counterfeit bearings.
